मालाड ट्रेल

हा मार्ग राष्ट्रीय उद्यानाच्या
पश्चिमेकडील बागातून जातो. या
मार्गावर पानझडी वनस्पती तसेच
सदाहरित वनस्पती असे दीर्घायु
पाहायला मिळते. सुरुवातीच्या परिसरात
साग बुडापी गर्दी आहे. या ठिकाणी
शितळासारखे बऱ्याच तसेच
बिचट्याच्या पायबुजा किंवा बिळा
पाहायला मिळण्याची खूप शक्यता आहे.
हा मार्ग जिल्हे संपतो तिथून मालाड
उपनगराचे दर्शन घडते. एकमेकांच्या
शेजारी अचब्यारे झाडांचे आणि
कोंक्रीटचे जंगल यांचा जागेसाठी सुरु
असणारा झगडा इथे पाहायला मिळतो.

Malad Trail

This trail goes along the western
edge of the Park. The habitat
along the trail varies from dry
deciduous forest to evergreen
forest. At the beginning of the
trail there is an abundance of
teak trees. There is a good
chance of spotting wildlife like
spotted deer and also tell-tale
signs of leopards passing
through, like pugmarks or scat.
The trail ends at the edge of the
forest from where one can see
the suburb of Malad. Here, one
can see two jungles next to
each other and fighting for
space – one made of trees and
the other made of concrete!
